

FLEET TRACKING - MARINE

THE SYSTEM

How do you manage a business when you can't see your workers?

Cypress has developed GPS hardware and a web-based application that allows you to control your mobile marine operations.

SAVE TIME

- Increase employee productivity by reducing driving time
- Eliminate scheduling inefficiencies
- Reduce unauthorized trips and stops
- Reduce overtime

SAVE MONEY

- Save fuel costs by eliminating inefficient routes
- Monitor vessel speed to reduce fuel consumption
- Protect high-value marine assets

TRACK ALL YOUR MARINE ASSETS

- From the comfort of your office you can receive reports instantly, monitor vessel maintenance, and pinpoint the exact location of your assets such as log booms and barges.
- Protect against theft and unauthorized after hours vessel use - this system will send you a notification if the vessel is moving when and where it shouldn't.

WHY OUR SYSTEM IS BETTER

- Wireless router functionality - plug your laptop into our modem to web browse, check email and in-vessel map.
- Direct, knowledgeable, no strings attached support. Because we manufacture the product, there's no middle-man hoops to jump through.

HOW IT WORKS

- A modem installs into a vessel
- The modem positions itself using embedded GPS technology
- It then wirelessly communicates vessel data using cellular technology
- Data is securely directed to our server via the internet
- Access fleet information from any computer with a web browser
