## 3 CTM-130/132 Linux Installation

This application notes describes how to install the CTM-130/132 modem on a Linux PC so that it is available to applications that may use it – for instance Dial-up Connections.

### Configure the CTM-130/132 (The below notes are based on the Red Hat OS)

Use AT commands to configure the modem.

If not already done so it is necessary to load the modem with its supplied telephone number – refer to the manual for AT commands required for this process.

Configure the modem with the **user name** and **password** provided by your dealer or network provider – refer to the manual for the AT commands.

### Install a modem driver in Linux

- Select **Start Application > Network Configuration**
- In **Devices**, Click **Add** and Select **Modem connection** and click **Next**.
- Use **#777** as Phone Number and **Cypress Solutions** as Provider Name.
- Enter **<Login Name>** and **<Password>** and click **Next**.
- Verify all of the above settings, then click **Finish**.
- Verify that the new modem connection is seen in **Devices**.

### How to setup a Dial-up Connection

- In **Devices**, Deactivate the current network device by clicking **Deactivate**.
- Verify all network devices are now inactive.
- Select the new modem connection and click **Activate**.
- Verify the new modem is **Active** .

You may now start your web-browser or other application requiring remote communications.

## 4 Technical Support/Warranty:

**Cypress Solutions Service**

**Support Group**
