

MESSAGE TERMINAL

BENEFITS

- Allows your worker access to modem information while on the job
- Creates a communication link - your worker can acknowledge and respond to incoming "pages"
- Allows vehicle commands to be made from outside of the vehicle
- Protects workers with a timed "check-in" feature

FEATURES

- Portable, industrial 2-way messaging system sends and receives messages from a remote server
- Easily removed from its mounting bracket for use as a mobile device
- Displays information such as GPS, LSD (legal subdivision), modem status and engine diagnostics
- LED lights, audible buzzer for notification

HOW IT WORKS

- The Message Terminal wirelessly communicates using cellular technology to a Gateway.
- The Gateway operates on our Chameleon Modem or other wireless data communication equipment.
- The rugged Chameleon Modem installs into the worker's vehicle.
- The Message Terminal creates a 2-way communication link allowing messages to be sent and received between itself and a computer.
