

Cypress IOT Device Management Platform

Securely monitor and deploy all your devices in one single platform.

Key Features

- High availability cloud application for real-time device monitoring and deployment.
- Collect data and monitor various devices all in one single platform.
- Configure devices and create commands.
- Receive notifications for configurations on job status change (individual device, on failure, or on completion)
- Update multiple devices using tags.
- Export reports as PDF, Excel or HTML.
- Create and manage distribution lists for email, SMS, and webhook alerts.

Benefits

- Gain valuable insights about your devices and view the overall health of your network.
- Acquire real-time alerts and reports on device status and conditions.
- Visualize key parameters to troubleshoot and support field issues.
- Integrate data through APIs for deeper analysis and control with third-party applications.
- Maximize efficiency by setting automation for mass firmware and software updates to increase functionality.

Overview

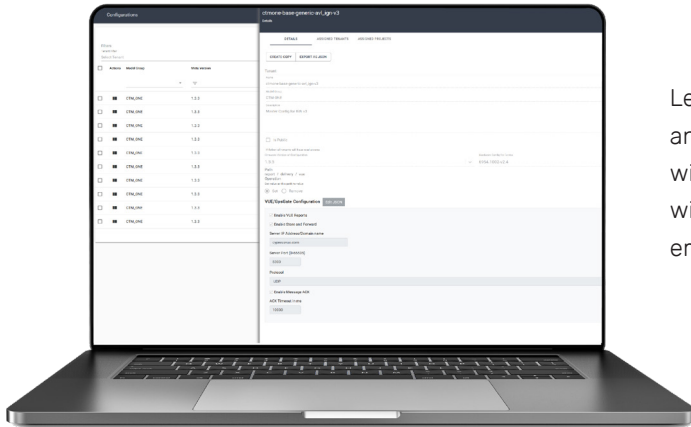

Cypress IOT is a secure multi-tenant device management software. The platform provides the ability to securely configure and deploy devices, as well as updating device firmware. Edit configurations, add jobs, and automate tasks all from your desktop, tablet or smartphone.

You can set up pre-configured intervals where devices will automatically check-in to Cypress IOT. Configurations and updates can be applied during that check-in process. The platform allows administrators to group by projects and assign users based on requirements. In addition, users can easily group and sort assets with a visual indication of device status and operating parameters.

Visualize your telemetry data in dashboards and secure insights from these analytics. Cypress IOT also supports a secure API for integration with other cloud applications.

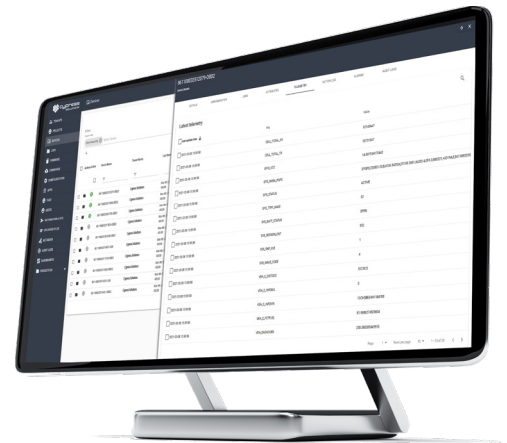

Manage Devices Securely

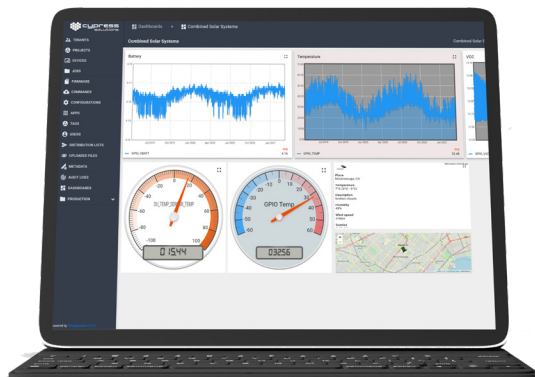

Leverage the Cypress IOT platform to manage your projects, active devices and edit configurations. Connect with our CTM and Oxygen 3 Plus devices or with your existing hardware. Add jobs and commands to automate processes with 24/7 remote control. Set up real-time notifications and alerts via SMS or email.

Collect Powerful Data

With the Cypress IOT platform, you are in command. Configure your devices to receive telemetry values at certain intervals and store them all in one place. Let Cypress IOT monitor device security and deploy them safely. View the collected data in visual charts and take important actions.

Run Advanced Reporting

Cypress IOT's advanced reporting tool allows you to build your dashboard with custom widgets. Display data in different forms to visualize real-time diagnostics. Generate new opportunities with predictive insights.
