

ROUTE COMPLETION SERVICE

Cypress VUE

Optimize route planning with RCS

The Route Completion Service (RCS) is an add-on system for the Cypress VUE fleet tracking solution. The RCS gives a full view of the route completion levels of various fleet activities in real-time. Set requirements to define a complete route based on your fleet activity. Monitor progress with corresponding colors based on predefined requirements for complete routes displayed on the map.

This easy-to-use system is customizable to fit your organization's service. Examples include snow clearing, street sweeping and dust suppression operations.

Key Features

- Map out specific routes using geofences
- Identify route progress with different colours on the map
- Live updates within the past 48 hours at-a-glance
- Customizable, user-friendly dashboard display

Main Benefits

- Review historical and current fleet activity and movement
- Take control of managing progress for all vehicle route completion
- Efficiently plan and optimize routes via Zones - Routes - Segments

Track fleet activities with RCS

Plowing/Salting

Sweeping/Flushing

Grading

ROUTE COMPLETION SERVICE

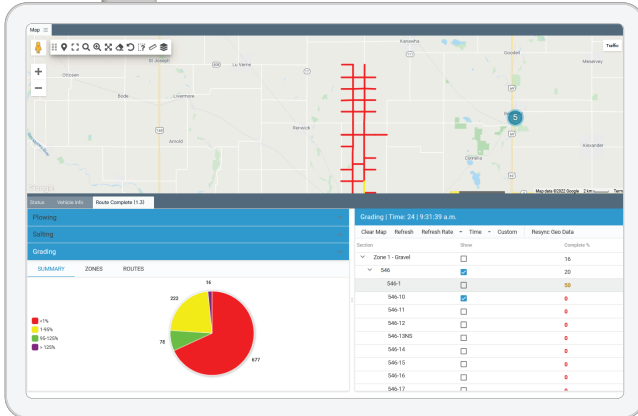

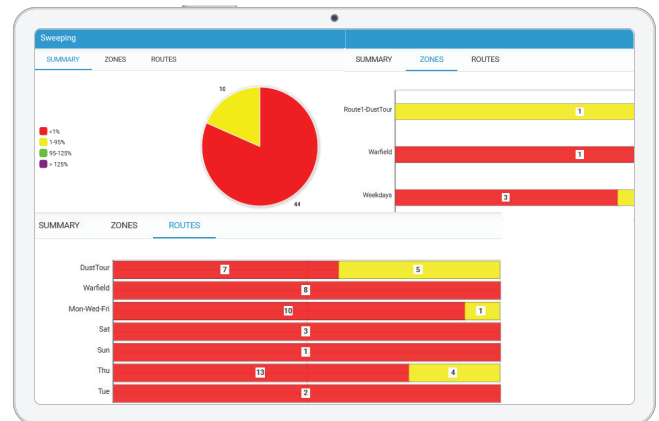

Cypress VUE

Familiarize yourself with the intuitive naming convention in RCS in the following hierarchy:

Zones	Routes	Segments
Primary grouping level Contain one or more routes	Secondary grouping level Contain one or more segments	Tertiary grouping level Contain sections of roads

Activity Panels

Gain an overview of your configured fleet activities from the initial set-up. Visualize activity progress in the Zones and Routes panels in real-time.

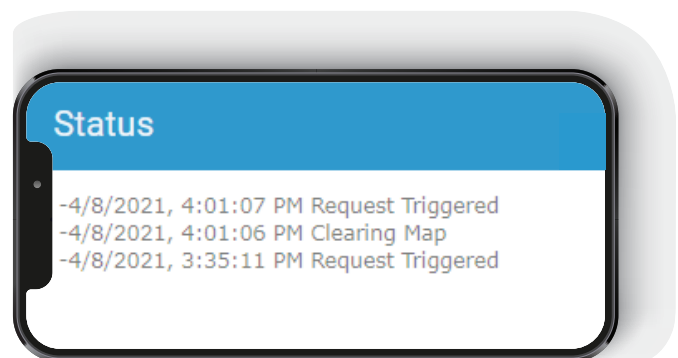

Detailed Information Panel

View completion percentage according to Zones - Routes - Segments.

For instance, a complete route is defined as two passes down the same road with a plow blade down to ensure the road was plowed in both directions.

Status Panel

Utilize the status panel as a diagnostic tool to record system operations and errors.
