

# FLEET TRACKING SOLUTION GRADERS

## All-in-One Solution

Our unique fleet management system combines the capabilities of our flexible CTM-ONE wireless gateway together with our Cypress VUE platform to track assets, monitor data and generate reports.

This complete solution has become the go-to for many municipalities due to its ease of use as well as its ability to integrate with existing customer applications and various grader models.

## Cypress VUE

Cypress VUE is a web-based software solution capable of tracking, storing and reporting the movement and actions of vehicles and other sensor equipment in real-time. Its user-friendly interface provides data in both map and textual formats.

## Key Features

- Create and edit geofences to monitor and control assets
- Customizable dashboarding for effortless data visualization
- Advanced reporting tool for important vehicle parameters
- Map out and track route completion
- Real-time vehicle diagnostics and instant alerts
- Dash camera integration for live street view

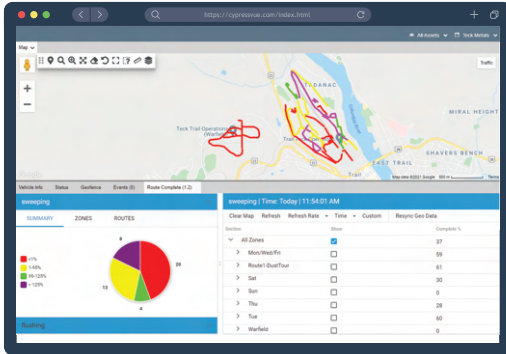

## Custom Grader Reports

Create custom grader reports to track the performance of your grader fleet. Track key grader parameters including total distance traveled, graded distance, max speed, and distance plowed by front blade. Reports are specific to exact dates and times to help track the amount of work done in a certain period.

# FLEET TRACKING SOLUTION GRADERS

## Route Completion Service

- Map out specific grader routes using geofences
- Define a complete route (ex. two passes down one road)
- Track overall percentage of route completion
- View updated route progress at any point in time
- Identify route progress with different colours on the map

## CTM-ONE Wireless Gateway

## CTM-ONE Wireless Gateway

The CTM-ONE is built with a variety of data interfaces, advanced power management and GNSS. The wireless gateway can be customized and built to fit your exact business needs. The CTM-ONE has internal antennas and an optional cable cover that provides an extra level of protection. Users can reduce installation time by using a single wire hookup for compatible CAN Bus systems.

Reliably track,  
monitor and control  
assets to improve  
productivity and  
fleet safety in one  
single platform.
